THE SITUATION IN GREECE

The greek state, by taking upon the organisation of the olympic games, of 2004, managed to brace the effort of its modernisation. Modernisation and reorganisation of its institutions, targeting to the better exploitation and oppression of the people, who now are called to pay this commitment, by new and harder taxes. By the undertakement of the olympic games, the greek state, tries to prove its domination, at the Balcania, as the most powerful, who will control the area.

The last months, there is an priggishness effort, by forcing out the homeless, and other people who spoil the "window" of the city, from the central places of Athens, (just like what happened, in Atlanta 96).

The state, targeting to show that controls the situation and to prevent situations, which are turning against it, strains, the quelling at many sectors. So, there are many control points, at the streets, by the pretextion of the traffic offenses and at the areas outside schools, by the pretextion of the protection from drug dealing. Of course, the only reason that police is present outside schools, only drugs could not be. The truth is that are there in order to quell the reactions of the students, against the new bill, which concerns the area of education.

These explosion of social anger is what the sovereigns try to prevent and hit, at their birth, before this anger takes the character, they always tremble.
